

Dear Colleague,

We would like to let you know we have recently moved our office from Sidney to Victoria, BC – a few kilometers down the road.

ASL has grown from 15 employees to over 40 in the last 2 years with many projects on-the-go all over the world. As a result we now have more field personnel, scientific analysts, and support staff. Also, our merger with Borstad Associates 18 months ago added 7 remote sensing specialists to our office. The new premises have much more space to accommodate people and our expanded inventory of oceanographic equipment.

The larger and more efficient manufacturing area will streamline production of our Ice Profiler, Wave Profiler, Acoustic Water Column Profiler, and ASFM products.

ASL has also recently launched a new website. The new website is user friendly, and has a clean and attractive design. [www.aslenv.com](http://www.aslenv.com)
